Health o meter® Professional Innovative Scales

New in the Arab Health Region

The manufacturer of Health o meter® Professional, the world's most recognized brand in patient weighing scales, Pelstar LLC, has been supplying hospital quality scales in the Middle East / Arab Hospital region for over 5 years, and is a certified ISO 13485 company committed to offering its customers premium quality scales at the right price.

The company recognizes the many demands distributors and healthcare professionals face now and recently introduced ProPlus® -- a new line of 10 innovative scales for hospital, clinical and physician uses. The weighing capacity of this new line varies by scale and goes up to 1000 lb / 454kg. All models are printer, computer or EMR / EHR ready, to reduce errors and save time in use. Additionally, the company provides a 3-year manufacturer's warranty on all these scales.

Nick Anastasi, International Sales Manager for the company, has been working with distributors in the Middle East / Arab Hospital region, providing training and support for this new line of high quality, well-designed scales. He comments that "ProPlus® is not only innovative and designed to meet modern healthcare requirements,

Health o meter®

P r o f e s s i o n a l

but these scales also provide the lowest cost of ownership in use."

The new ProPlus® line provides durable, non-skid platforms and LB/KG conversion with a lockout option to increase safety in use. Patient safety, ease of use and operator-friendly options are also standard in other Health o meter® Professional scales. Since 1919 Health o meter® Professional has been the healthcare industry's leading scale brand, designing and selling premiere weighing instruments to professionals throughout the world.

Three years ago, Health o meter® was the first physician scale brand to offer a complete solution for EMR developers and providers to integrate patient scales into their systems and has a free Software Development Kit for EMR integration available. As a market leader, the company saw develop-

ing a solution for this important connectivity between device and data management systems as imperative and as part of its commitment to the medical community and patients worldwide.

Health practitioners and pediatricians weigh or take the height of their patients or clients with Health o meter® Professional products in doctor's offices, clinics, hospitals, long term care, bariatric, therapeutic and fitness facilities, professional home health care giver settings, veterinary and other locations where precision is important around the clock.

This new line of scales is another example of the scale expertise and knowledge the company has brought to professionals over the past century. Built into ProPlus® scales are 270 Patient memory, multiple data ports, exclusive tare functionality, customiz-

able weight display options, user-friendly data entry screens that are easy to understand, motion-sensing technology to compensate for patient movement, Body Mass Index (BMI) calculation and troubleshooting diagnostics.

ProPlus® scales are all factory calibrated and include patented features that include self calibration, so no test weights are required. The 180° swivel display head is easy to use, and easy to read. The handrail scales have "live" handrails for patient stability. The full page ad in this issue provides more details about these scales.

Over the years, the company has received numerous awards, recognized by many distributors as their preferred supplier. Dan Maeir, CEO of the company, told Middle East Hospital that "Our continued success stems from our commitment to innovation, dependability, dedication to customers and

Health o meter® Professional Mission Statement:

We'd like to have the opportunity to work with you. We continually develop and improve our products to work with the advances in technology that are available today. "Health o meter® Professional is dedicated to providing healthcare professionals with the best weighing scales. We will do everything possible to make it easy for our customers to do business with us."

eight decades of technical expertise that allow us to provide innovation to a greater scale™."

He added, "While doctors have trusted the Health o meter® name and reliability for nearly a century, their patients have also come to recognize the promise of quality and precision that a Health o meter® scale represents. Health o meter® Professional scales set the standard for superior quality, innovation and better patient care. We recognize the importance of these standards for healthcare."

We'd like to have the opportunity to work with you. We continually develop and improve our products to work with the advances in technology that are available today.

We understand the importance of a dependable scale and your need to save time any way you can, without compromising accuracy.
